VFP Table Exporter

The VFP Table Export utility by MJM enables the extraction of key operational business data from a legacy Visual FoxPro database to a modern SQL database. This new utility allows businesses to utilise data once previously unaccessible to be utilised in BI/reporting tools.

Data Extraction & Replication

Reads native FoxPro tables, replicating the data to modern SQL datatypes. Apply filters to define the tables for export.

Key Features:

- Connects to .DBC databases.
- Specify the tables to export.
- Efficient batched exports for large datasets.
- Configurable export time.

Scheduling & Automation

Export on a regular configurable interval to ensure up to date data is available for reporting purposes.

Key Features:

- Automatic retries, logs and row-level error information.
- Configurable export interval times.

Delivery & Integration

Export to local or remote/cloud SQL databases seamlessly and generate tables schemas when desired.

Key Features:

- Destinations: Local, Remote and/or cloud (Azure/AWS).
- Generate schema files for exported tables.
- Export to SQL Server 2012+.

Monitoring, Audit & Security

Transparent operations and data governance.

Key Features:

- Table export history and duration logs.
- Microsoft/Windows and SQL authentication-based access supported.
